

Floodline Plug and Play Auto-Connect

Andel's tried and tested Floodline multi-zone leak detection systems are well known for being the most reliable, effective and easy to use. The "Plug & Play Auto-Connect" system allows instant, foolproof connection for quick, no-hassle installation by any engineer, contractor or competent person.

Using a special version of the industry standard "RJ" type network connector, Floodline Plug & Play has universal acceptance. This robust, stable plug and socket system gives quick, easy, positive connection every time. Maintenance, replacement and modification couldn't be easier.

8 Zone Detection Cable and patch-leader cables are available in a range of standard pre-terminated lengths. Other non-standard lengths can be supplied at no extra surcharge. All cables can also be cut and connected on site by trained engineers.

Standard lengths: 5m, 7.5m, 10m, 15m

Couplers:

In/out couplers perform all connection and zone change functions. No setup or links to change. No wire stripping. No confusion.

SOL - Start of Line
Connects Leader Cable to Detection Cable

Autocoupler
Connects one detection cable zone to another.
In-built system logic automatically sets its relative position and zone address.

EOL - End of line
Terminates last zone in line

HUDDERSFIELD - FM512048

E&OE Rev 1.0
